

TANISH AGARWAL

Greater Noida, India

☎ +91 8384852634 ✉ tanish@example.com 🐙 github.com/reztag 🔗 linkedin.com/in/taniish 🐦 x.com/reztag

PROFESSIONAL SUMMARY

- Dedicated Computer Science and AI student with hands-on experience in web development and performance optimization. Passionate about creating efficient solutions using modern technologies with a strong focus on clean code practices. Consistently applying algorithmic problem-solving skills. Seeking opportunities to leverage technical knowledge in collaborative environments to drive innovation and deliver impactful software solutions.

EDUCATION

GL BAJAJ INSTITUTE OF TECHNOLOGY AND MANAGEMENT

2022 - 2026 (Expected)

B.Tech in Computer Science and Engineering (AI)

GREATER NOIDA, India

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Artificial Intelligence, Database Systems
- Technical Achievement: Completed 3 functioning project applications with focus on practical implementation

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, SQL, C++, Java

Developer Tools: Git, GitHub, VS Code, API Integration

Frameworks/Libraries: Hugo, OAI Integrations

Skills: Web Development, Performance, Networking, Linux, Optimization, Database Management, Problem Solving

PROJECTS

Banking Management System — Java

- Developed a banking program supporting account creation, transaction processing, and balance inquiries
- Implemented error handling mechanisms ensuring reliability during user interactions
- Designed a simple terminal interface

Personal Blog using Hugo — HTML/CSS/Hugo

- Created a responsive personal blog platform with customized theme adaptations optimized for all device types
- Implemented SEO best practices increasing organic traffic potential by 40% through metadata optimization
- Utilized Hugo's templating system to reduce content update times by 75% compared to traditional CMS solutions

Basic Web Server — C++

- Engineered a lightweight HTTP server capable of handling 50+ concurrent connections with minimal resource utilization
- Implemented efficient request routing mechanisms reducing response latency by 30% compared to initial prototype
- Created comprehensive documentation enabling easy setup and configuration for different deployment environments

ACHIEVEMENTS

- * Optimized web project loading times by 45% through implementation of performance best practices
- * Participated in college-level hackathon creating a functional prototype in 24 hours

ADDITIONAL EXPERIENCE

Open Source Contributions

- * Suggested improvements to open-source projects, enhancing user understanding and adoption
- * Actively participated in online developer communities, providing solutions to technical challenges

Self-Directed Learning

- * Completed online courses in web development fundamentals and artificial intelligence applications
- * Developed personal projects to apply theoretical knowledge in practical scenarios
- * Active participation in trying and testing out AI models and tools
- * Understanding and fine tuning Linux environments
